

## Need a Cost Effective First Article Inspection Solution

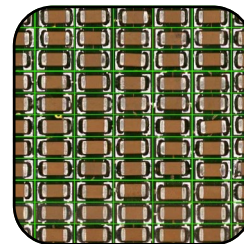

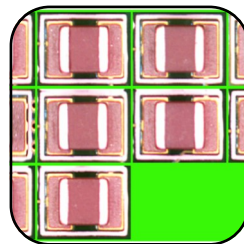

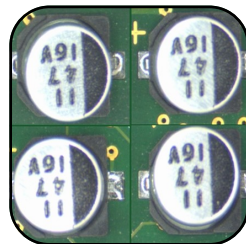

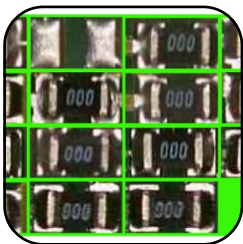

Inspection Xpress is a powerful solution for the inspection of the first off PCB's from a new manufacturing set up.

Additional use includes the Optical inspection of prototypes, small-series production, sampling and Final Inspection.

Saving valuable time. The software uses a revolutionary algorithm to manipulate the images that are captured and then displayed grouped by part number to the inspector.

The manner the images are presented make it particularly suitable for SMD device inspection. All Components are inspected as a group rather than individually.

The End result is a greatly increased production line availability saving valuable time and money.

### Benefits

- Inspection Xpress reduces Inspection time.
- Inspect all components of the first PCB off the line.
- Inspect more than 1 PCB ! ( prototype runs)
- Uses a unique and innovative solution to display components in the inspection window.
- Simple to program and use.
- Cost Effective. No waiting for AOI programs to be de-bugged

### Capabilities

- Intelligent software enabling effective manual inspection.
- Available with scanner or import images from your existing AOI system.
- Import layout PDF's to further aid Polarity Checking
- SMD or THT Inspection
- Presence
- Absence
- Polarity / Incorrectly Fitted
