

Accelonix supplies equipment, support and consumables to the electronics sector. We provide local specialist skills and knowhow across our four Business Groups; Microelectronics, Surface Mount, Test & Device Programming and Software Solutions.

Training Course: BJ820 Basic User Course - Operator

A one day training course that will be delivered through a combination of multi-media presentation and hands on experience in our dedicated applications cleanroom at our training facility in Staplehurst, Kent. Participants will be given an introduction to the architecture and operation of the Hesse BJ820 automatic wedge bonder, which can be applied to improve production efficiency.

Key Course Topics Covered

- Machine Safety
- Machine Architecture
- System Menu Navigation
- Wire & Tool Set Up
- Manual Bonding & Parameters
- Running in Production Mode
- Common Process Problems

This course is suitable for operators and junior technicians wishing to obtain a good basic level of understanding of the Hesse BJ820's capabilities and operation. Students will be introduced to the main machine operating modes and will be instructed on the correct setup and process procedures needed to run production. This theory will be reinforced by practical sessions and activities on our dedicated BJ820.

Maximum 3 participants.
