

Products & Services

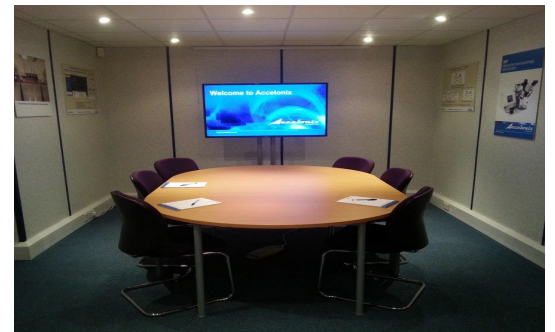

Accelonix supplies equipment, support and consumables to the electronics sector. We provide local specialist skills and knowhow across our four Business Groups; Microelectronics, Surface Mount, Test & Device Programming and Software Solutions.

Training Course: BJ820 Basic User Course -Technician

A two day training course delivered through a combination of multi-media presentation and hands on experience in our dedicated applications cleanroom at our training facility in Staplehurst, Kent. Participants will be given an introduction to the architecture, operation, calibration and setup of the Hesse BJ820 automatic wedge bonder which can be applied to improve production efficiency.

Key Course Topics Covered

- Machine Safety, Power Up
- Calibration Procedures
- System Menu Navigation
- Wire & Tool Setup
- Parameters & Manual Bonding
- Operation in Production Mode
- Common Process Problems

This course is suitable for technicians wishing to obtain a good basic understanding of the Hesse BJ 820's capabilities and operation. Students will be introduced to the main machine operating modes and will be instructed on the correct setup, process and calibration procedures needed to run and maintain production. This theory will be reinforced by practical sessions and tasks on our dedicated BJ820 located in our demonstration area.

Maximum 3 participants.
